NOTIFICATION

This is notification of an upcoming project under the Guam Water and Wastewater Infrastructure Improvements Program. The project includes installing the Effluent Outfall Diffuser for the Northern District Wastewater Treatment Plant (NDWWTP). It is anticipated that the Invitation to Bid will be advertised in late July or early August 2018.

The work covered under this contract includes completing the ocean-installation of the outfall diffuser by connecting 400 feet of diffuser pipe to the NDWWTP's existing high-density polyethylene (HDPE) outfall pipe. The Invitation for Bid will allow the Contractor to select one of two alternatives:

1. Reuse of an existing HDPE diffuser pipe with a concrete block anchoring system, or
2. Use of a new steel diffuser pipe with an anchoring system composed of articulated concrete block mats.

The outfall pipe is located in the Philippine Sea, approximately 2,000 feet offshore from Tanguisson Beach, Northwest Guam, at a depth of approximately 140 feet.

This project was bid previously on February 23, 2018, and subsequently rejected for various reasons. The design has since been revised to include a second option of using a steel pipe as well as incorporating other value engineering items to reduce costs. These design changes will be included in the subject rebid request.

We appreciate any interest you may have in providing a bid on this upcoming package. Please carefully watch Guam Waterworks Authority website at <http://guamwaterworks.org/bids/> for further bidding details.

Sincerely,

MIGUEL C. BORDALLO, P.E.
General Manager
